

Other companies may say they have advanced 1470 lasers to perform effective vein therapy.

But that's only *half* the story.

The other half is the proprietary, patent-pending 360° Radial™ fiber exclusive to biolitec. The efficiency of the Radial emitting fiber greatly enhances the high water absorbing advantages of the 1470nm wavelength. With the combination of the 1470nm delivered by the Radial fiber, we've substantially reduced post-operative pain, discomfort, bruising, and post-op medication.

By combining our low-energy laser and high-tech fiber, we've created a system that sends an optimum and homogenous dose of laser light into the vein, doing the job more efficiently than ever before.

It's an easy single-step procedure that takes vein therapy to a new level of patient satisfaction, with superb medical and cosmetic results. Patients can return to most of their normal activities right away.

What good is half the story? biolitec wants you to know just how easy and effective the ELVeS® PL-1470 Laser System will be for your patients—and your practice. For more information, contact us today at 800-934-2377. www.varicoseveinslaser.com
